As described in Section 2.5 of the textbook, the Domain Name System (DNS) maintains a distributed database. Its purpose is fulfilling a critical role in the Internet infrastructure. In this lab, we'll take a closer look at the DNS. We'll see that the client's role in the DNS relatively simple - a client wants to "look up" the IP address for a hostname. We'll see that a lot of work goes into providing this simple service. We'll see that the client's role in the DNS is relatively simple - a client sends a query to its local DNS server, and receives a response from its local DNS server. The client's role is relatively simple - but we'll see that much more is going on behind the scenes. We'll see that the client's role in the DNS is relatively simple - but we'll see that the client's role is critical to the DNS infrastructure. In this lab, we'll take a closer look at the DNS
